CHRONOBIOLOGY INTERNATIONAL, 18(6), 1255–1261 (2001)

SUBJECT INDEX TO VOLUME 18

A

Abdominal ganglia, of crayfish *Procambarus clarkii*, circadian oscillations revealed by spontaneous and light-evoked discharge of, 759–765
Actigraphic monitoring, for comparison of ultradian and circadian activity-rest rhythms for preterm neonates and full-term neonates, 697–708
Administration time differences, in digoxin kinetics in healthy young subjects, 841–849
Age
  influence on glomerular angiotensin II receptors in normotensive Sprague-Dawley and transgenic hypertensive TGR(mREN2)27 rats, 447–459
  role in sleep duration and sleepiness of Parisian schoolchildren, 1005–1017
Aggressive behavior, day-night variation among psychiatric inpatients, 503–511
Aging mice, impaired expression of *mPer2* circadian clock gene in the suprachiasmatic nuclei of, 559–565
Alzheimer's disease, actigraphic sleep-wake patterns and urinary 6-sulfatoxymelatonin excretion in patients with, 513–524
Angiotensin II receptors, glomerular, influence in normotensive Sprague-Dawley and transgenic hypertensive TGR(mREN2)27 rats of circadian time and age on, 447–459
Annual rhythms
  of human blood cholesterol concentrations, influence of dietary intake and physical activity on, 541–557
  in melatonin, relationships with immune system status in the tropical palm squirrel *Funambulus pennanti*, 61–69
Arginine vasotocin and mesotocin, water deprivation and circadian changes in the plasma of the domestic hen (*Gallus domesticus*), 947–956

B

Baroreflex, reduced sensitivity preceding the development of hypertension in TGR(mREN2)27 rats, 215–226
Bedtime, parental enforcement during childhood as a modulator of preference of Japanese junior high school students for eveningness chronotype, 823–829
Biological timing, and the clock metaphor, 329–369
Blood pressure
  repeated assessment of the endogenous 24h profile under constant routine, 85–98
  of transgenic hypertensive rats, 665–681
Body temperature, morningness-eveningness effects on circadian rhythmicity of, 249–261
Breast cancer, circadian rhythms of basic fibroblast growth factor, epidermal growth factor, insulin-like growth factor-1, insulin-like growth factor binding protein-3, cortisol, and melatonin in women with, 709–727

C

Cardiac thrombotic events, impaired modulation of circadian rhythms in patients with diabetes mellitus as a risk factor for, 109–121
Cardiovascular regulation, in TGR(mREN2)27 rats, 461–474

Casein kinase I, in the circadian clockworks, 389–398
Caudal photoreceptor, of crayfish *Procambarus clarkii*, circadian oscillations revealed by spontaneous and light-evoked discharge of, 759–765
Cellular communication, within the suprachiasmatic nucleus, 579–600
Cholesterol, human, influence of dietary intake and physical activity on annual rhythm of blood concentrations of, 541–557
Chronic fatigue syndrome and idiopathic chronic fatigue, a community-based study of seasonal variation in the onset of, 315–319
Chronobiology, and Julien Joseph Virey, 173–186
Chronotoxicology, of florfenicol, 567–572
Circadian activity-rest rhythms, comparison for preterm neonates and full-term neonates using actigraphic monitoring, 697–708
Circadian characteristics, of corticosterone secretion in red-backed voles (*Clethrionomys gapperi*), 933–945
Circadian oscillators, in the European rabbit, 1–26
Circadian pacemaker
  function and entrainment during maturation of TGR(mREN2)27 and Sprague-Dawley rats, 627–640
  rat, effect of repeated pulses of light at the same time on period responses of, 187–201
Circadian period, genetically altered, temporal organization of feeding in Syrian hamsters with, 657–664
Circadian rhythms
  adjustability in the cockroaches, 767–780
  of basic fibroblast growth factor, epidermal growth factor, insulin-like growth factor-1, insulin-like growth factor binding protein-3, cortisol, and melatonin in women with breast cancer, 709–727
  of casein kinase I, 389–398
  of cellular communication and coupling within the suprachiasmatic nucleus, 579–600
  of chronotoxicology of florfenicol, 567–572
  of cortisol and body temperature, effects of morningness-eveningness on, 249–261
  dependence of cisplatin-induced vomiting on, 851–863
  of double (rate-pressure) product in healthy normotensive young subjects, 475–489
  endogenous, of blood pressure under constant routine, repeated assessment of, 85–98
  in the expression of the mt1 melatonin receptor subtype in coronary arteries of patients with coronary heart disease, 973–985
  of fruit fly *Drosophila melanogaster*, eclosion timing as a reflection of differences in the organization of, 601–612
  in hamsters
    exogenous corticosteroids and shifts of, 203–213
    phase-shifting effects on activity of dusk-like and dawnlike light pulses on, 413–421
  in the human retina, 957–971
  impaired modulation in patients with diabetes mellitus, 109–121
  light-induced phase delays of, decrease caused by S20098, 781–799
  of locomotor activity of the diurnal Indian palm squirrel in constant light, 47–60
  of *mCry1/mCry2*-deficient mice, 613–625
  of melatonin as a physiological feature associated with healthy longevity, 99–107
  of motor activity in the mouse, effect of light on the development of, 683–696
  in plasma catecholamines, angiotensin peptides, and telemetric heart rate variability, 461–474
  and the redox state (book review), 321–322
  in the responsiveness of human gallbladder to sulfated mineral water, 1029–1039
  of serum leptin in healthy and diabetic men, 273–283
  of simulated flight performance of pilots, derivation from ultradian components, 987–1003

Circadian time, influence on glomerular angiotensin II receptors in normotensive Sprague-Dawley and transgenic hypertensive TGR(mREN2)27 rats, 447–459
Circadian time structure, sleep-wake schedule disorder disability as a lifelong untreatable pathology of, 1019–1027
Circadian timing systems, in vertebrates, 137–172
Circannual rhythm, underlying seasonal affective disorder, 309–313
Circatidal rhythms, of eel pout *Zoarces viviparus*, 27–46
Cisplatin, dependence on circadian timing of vomiting induced by, 851–863
Clock gene, *mPer2* circadian, impaired expression in the suprachiasmatic nuclei of aging mice, 559–565
Clock metaphor, and biological timing, 329–369
Clotting time, in patients prepared for open-heart surgery, seasonal variation of effect of a fixed dose of heparin on, 865–873
Cockroaches, adjustability of the circadian clock in, 767–780
Constant routine, repeated assessment of the endogenous 24h profile of blood pressure under, 85–98
Contractility, of aorta and mesenteric and renal arteries in transgenic hypertensive rats, day-night variation in, 665–681
Coronary heart disease, 24h variation in the expression of mt1 melatonin receptor subtype in coronary arteries of patients with, 973–985
Corticosteroid, exogenous, and shifts of circadian rhythms in hamsters, 203–213
Corticosterone, circadian characteristics of secretion in red-backed voles (*Clethrionomys gapperi*), 933–945
Cortisol, morningness-eveningness effects on circadian rhythmicity of, 249–261
Coupling, within the suprachiasmatic nucleus, 579–600
Crayfish *Procambarus clarkii*
  circadian oscillations revealed by spontaneous and light-evoked discharge of the isolated abdominal nerve cord of, 759–765
  extraretinal photoreception for mediation of photoperiodic induction of ovarian maturation in, 423–434
Cryptochromes *mCry1/mCry2*, further characterization of, 613–625
Cytokines, circadian rhythms in women with breast cancer, 709–727

D

Day-night variation
  in aggressive behavior among psychiatric inpatients, 503–511
  in the in vitro contractility of aorta and mesenteric and renal arteries in transgenic hypertensive rats, 665–681
Delayed sleep phase syndrome
  hypersensitivity of melatonin suppression in response to light in patients with, 263–271
  in one family, 831–840
Development, in the European rabbit, 1–26
Diabetes mellitus
  circadian variation of serum leptin in men with, 273–283
  impaired modulation of circadian rhythms in patients with, 109–121
Dietary intake, influence on annual rhythm of human blood cholesterol concentrations, 541–557
Digoxin kinetics, morning-evening administration time differences in healthy young subjects, 841–849
Diurnal variation, of subjective activation and mood, gender differences in, 491–502
Double (rate-pressure) product, circadian rhythm in healthy normotensive young subjects, 475–489

E

Eclosion timing, as a reflection of differences in the circadian organization of the fruit fly *Drosophila melanogaster*, 601–612
Eel pout *Zoarces viviparus*, time-keeping system of, 27–46
Endogenous circadian rhythm, of blood pressure under constant routine, repeated assessment of, 85–98

Entrainment, of the circadian pacemaker during maturation of TGR(mREN2)27 and Sprague-Dawley rats, 627–640
European rabbit, diversity and development of circadian rhythms in, 1–26
Eveningness
  genetic analysis of, 809–822
  parental enforcement of bedtime during childhood modulates preference of Japanese junior high school students for, 823–829
Extraocular phototransduction, in vertebrates, 137–172
Extraretinal photoreception, for mediation of photoperiodic induction of ovarian maturation in crayfish *Procambarus clarkii*, 423–434

F

Feeding, temporal organization in Syrian hamsters with a genetically altered circadian period, 657–664
Feeding entrainment, in the European rabbit, 1–26
Fish, eel pout *Zoarces viviparus*, time-keeping system of, 27–46
Florfenicol, chronotoxicology of, 567–572
Free-running rhythms, of body temperature and activity in the rat, effect of S20098 on, 781–799
Freund's adjuvant arthritis in rats, effect of melatonin on 24h changes in plasma protein levels during the preclinical phase of, 435–446
Fruit fly *Drosophila melanogaster*, eclosion timing as a reflection of differences in the circadian organization of, 601–612

G

Gallbladder, human, circadian variations in responsiveness to sulfated mineral water, 1029–1039
Gender differences, in diurnal variation of subjective activation and mood, 491–502
Genetic analysis, of morningness and eveningness, 809–822
Genetics, of delayed sleep phase syndrome in one family, 831–840

H

Hamsters
  activity rhythms under entrained and free-running conditions, 921–932
  exogenous corticosteroid and shifts of circadian rhythms in, 203–213
  with a genetically altered circadian period, temporal organization of feeding in, 657–664
  phase-shifting effects of dusklike and dawnlike light pulses on the circadian activity rhythms of, 413–421
Hen (*Gallus domesticus*), water deprivation and circadian changes in plasma arginine vasotocin and mesotocin in, 947–956
Heparin fixed dose, seasonal variation of effect on activated clotting time in patients prepared for open-heart surgery, 865–873
Hormones, circadian rhythms in women with breast cancer, 709–727
Hourglass mechanisms, biological timing and the clock metaphor, 329–369
Hypertension, reduced baroreflex sensitivity and blunted nitric oxide synthesis preceding development in TGR(mREN2)27 rats, 215–226

I

Immune system status, in the tropical palm squirrel *Funambulus pennanti*, relationship with the annual rhythms in melatonin in, 61–69
International Society of Chronobiology meeting
  abstracts, 1057–1235
  introduction to abstracts from, 1055

L

Leptin, circadian variation in the serum in healthy and diabetic men, 273–283

Light
dusklike and dawnlike pulses, phase-shifting effects on the circadian activity rhythms of Syrian hamsters, 413–421
effect on the development of the circadian rhythm of motor activity in the mouse, 683–696
hypersensitivity of melatonin suppression in patients with delayed sleep phase syndrome in response to, 263–271
neural basis and biological function of masking in mammals by, 737–758
repeated pulses, effect on period responses of the rat circadian pacemaker, 187–201
Light entrainment, in the European rabbit, 1–26
Light wavelength, effect on suppression and phase delay of the melatonin rhythm, 801–808
Light-dark cycles, short, effect on young and adult TGR(mRED2)27 rats, 641–656
Light-induced phase delays of circadian rhythm, decrease in the rat caused by S20098, 781–799
Locomotor activity
of cockroaches, 767–780
of the diurnal Indian palm squirrel, circadian rhythm in constant light, 47–60
of *mCry1/mCry2*-deficient mice, 613–625
rhythms in wild and laboratory golden hamsters under entrained and free-running conditions, 921–932
Logistic regression, of season of birth and reproductive performance, 525–539
Longevity, melatonin circadian rhythm as a physiological feature associated with, 99–107
Longitudinal data, of time series, nonlinear estimation and statistical testing of periods in, 285–308
Longitudinal investigation, of seasonal variation in mood, 875–891
Luteinizing hormone, temporal pattern of secretion of, 399–412

M

Mammals, diversity and development of circadian rhythms in, 1–26
Masking, by light, neural basis and biological function in mammals, 737–758
Medicine history, and Julien Joseph Virey, 173–186
Melatonin
annual rhythms, relationships with immune system status in the tropical palm squirrel *Funambulus pennanti*, 61–69
circadian rhythm as a physiological feature associated with healthy longevity, 99–107
effect on 24h changes in plasma protein levels during the preclinical phase of Freund's adjuvant arthritis in rats, 435–446
hypersensitivity of suppression in response to light in patients with delayed sleep phase syndrome, 263–271
rhythm, effect of light wavelength on the suppression and phase delay of, 801–808
Metabolites, temporal variability of valproic acid in urinary clearance of, 123–129
Mood, a longitudinal investigation of seasonal variation in, 875–891
Morning-evening administration time differences, in digoxin kinetics in healthy young subjects, 841–849
Morningness, genetic analysis of, 809–822
Morningness-eveningness
effects on circadian rhythmicity of cortisol and body temperature, 249–261
in healthy female subjects, relation of temperature profiles to, 227–247
Motor activity circadian rhythm, effect of light on the development in the mouse, 683–696
Mouse, effect of light on the development of the circadian rhythm of motor activity in, 683–696
mPer2 circadian clock gene, impaired expression in the suprachiasmatic nuclei of aging mice, 559–565
mt1 melatonin receptor subtype, in coronary arteries of patients with coronary heart disease, 24h variation in the expression of, 973–985
Multiple components analysis, of time series, 285–308

N

Neuroendocrine regulation, of the human ovarian cycle, 893–919

Nitric oxide, blunted synthesis preceding the development of hypertension in TGR(mREN2)27 rats, 215–226
Nonlinear behavior, of human respiratory movement during different sleep stages, 71–83
Nursing entrainment, in the European rabbit, 1–26

O

Oscillators, in the suprachiasmatic nucleus, 371–387
Oscillatory mechanisms, biological timing and the clock metaphor, 329–369
Ovarian cycle, human, neuroendocrine regulation of, 893–919

P

Palm squirrel *Funambulus pennanti*
  circadian locomotor activity rhythm in constant light, 47–60
  relationship between the annual rhythms in melatonin and immune system status in, 61–69
Parental socioeconomic status, role in sleep duration and sleepiness of Parisian schoolchildren, 1005–1017
Period responses, of the rat circadian pacemaker, effect of repeated pulses of light at the same time on, 187–201
Phase delays
  light induced, decrease in the rat caused by S20098, 781–799
  of the melatonin rhythm, effect of light wavelength on, 801–808
Phase-shifting effects, of dusklike and dawnlike light pulses on the circadian activity rhythms of Syrian hamsters, 413–421
Phosphorylation, and regulation of clock proteins, 389–398
Photoperiodic induction of ovarian maturation, in crayfish *Procambarus clarkii*, mediation by extraretinal photoreception, 423–434
Phototransduction, extraocular, in vertebrates, 137–172
Physical activity, influence on annual rhythm of human blood cholesterol concentrations, 541–557
Protein levels, during the preclinical phase of Freund's adjuvant arthritis in rats, effect of melatonin on 24h changes in the plasma, 435–446
Psychiatric inpatients, day-night variation in aggressive behavior among, 503–511

R

Red blood cell destruction, cyclic, in thalassemia, 729–736
Red-backed voles (*Clethrionomys gapperi*), circadian characteristics of corticosterone secretion in, 933–945
Regression-to-the-mean statistical artifact, 1041–1053
Reproductive performance, and season of birth, 525–539
Respiratory movement, human, nonlinear behavior during different sleep stages, 71–83
Retinal circadian rhythms, in humans, 957–971

S

S20098, effect on the free-running rhythms of body temperature and activity and as a cause of a decrease in the light-induced phase delays of circadian rhythm in the rat, 781–799
School schedule, role in sleep duration and sleepiness of Parisian schoolchildren, 1005–1017
Season of birth, and reproductive performance, 525–539
Seasonal affective disorder, possibility of circannual rhythm underlying, 309–313
Seasonal variation
  in the effect of a fixed dose of heparin on activated clotting time in patients prepared for open-heart surgery, 865–873
  in mood, a longitudinal investigation of, 875–891
  in the onset of chronic fatigue syndrome and idiopathic chronic fatigue, 315–319

Sleep
effect on temperature profiles, 227–247
stages, nonlinear behavior of human respiratory movement during, 71–83
Sleep duration and sleepiness, of Parisian schoolchildren, role of school schedule, age, and parental socioeconomic status on, 1005–1017
Sleep-wake patterns, actigraphic, in patients with Alzheimer's disease, 513–524
Sleep-wake schedule disorder disability, as a lifelong untreatable pathology of the circadian time structure, 1019–1027
Subjective activation and mood, gender differences in diurnal variation of, 491–502
Sulfated mineral water, circadian variations in responsiveness of human gallbladder to, 1029–1039
6-Sulfatoxymelatonin, urinary excretion in patients with Alzheimer's disease, 513–524
Suprachiasmatic nuclei
of aging mice, impaired expression of the *mPer2* circadian clock gene in, 559–565
cellular communication and coupling within, 579–600
multiple oscillators in, 371–387

T

Temperature profiles, effect of sleep on and relation to morningness-eveningness in healthy female subjects, 227–247
TGR(mREN2)27 rats
cardiovascular regulation in, 461–474
circadian pacemaker function and entrainment during maturation of, 627–640
day-night variation in the in vitro contractility of aorta and mesenteric and renal arteries in, 665–681
reduced baroreflex sensitivity and blunted nitric oxide synthesis preceding hypertension development in, 215–226
young and adult, effect of short light-dark cycles on, 641–656
Thalassemia, cyclic red blood cell destruction in, 729–736
Time series
of cyclic red blood cell destruction in thalassemia, 729–736
nonsinusoidal longitudinal with unequidistant observations, nonlinear estimation and statistical testing of periods in, 285–308

U

Ultradian activity-rest rhythms, comparison for preterm neonates and full-term neonates using actigraphic monitoring, 697–708
Ultradian components, derivation of circadian pattern of simulated flight performance of pilots from, 987–1003
Ultradian oscillators, multiple, and regulation of the temporal pattern of luteinizing hormone secretion, 399–412
Unicorn milk, and regression-to-the-mean statistical artifact, 1041–1053
Urinary clearance, of metabolites, temporal variability of valproic acid in, 123–129

V

Valproic-acid, temporal variability in urinary clearance of metabolites, 123–129
Virey, Julien Joseph, and the birth of chronobiology, 173–186

W

Water deprivation, and circadian changes in plasma arginine vasotocin and mesotocin in the domestic hen (*Gallus domesticus*), 947–956
